Ventilators are devices that function as bellows to draw air into and out of your lungs. The ventilator is programmed by the respiratory therapist and doctor to regulate how much air and how frequently it pushes air into the lungs.

The main types of ventilator devices are intensive care unit/critical care, transport/portable/ambulatory, and neonatal. Neonatal ventilator devices are kept in the healthcare settings for newborns and human infants during the first month after birth. The interface is invasive and non-invasive. The various end-users are hospitals and clinics, home care, ambulatory care Centers, and others.
