The airport security refers to the procedures and methods used to protect passengers, personnel, aircraft, and airport property from harm caused by accident or malice, crime, and other dangers. Airport security is a set of measures and people and material resources aimed at protecting civil aviation from acts of unlawful interference such as terrorism, sabotage, threats to life and property, false threat communication, bombing, and so on. It tries to keep these risks at bay by using various methods of scanning.

The main types of technologies in the airport security market are access control, cybersecurity, perimeter security, screening and scanning, surveillance, real-time locating systems (RTLS), and others. Access control refers to a data security process that enables organizations to manage authorized people to access corporate data and resources. Secure access control uses policies that verify users and ensure control access levels that are granted to users. Also, helps in easy access to data. It is further divided by system into metal detectors, fiber optic perimeter intrusion, backscatter x-ray systems, cabin baggage screening systems, and others. The various application includes a civilian and commercial airport and military airport. These are used to protect civil aviation from acts of unlawful interference such as terrorism, and sabotage.
