Arrhythmia monitoring devices are equipment that determines the type and cause of abnormal heart rhythms. The arrhythmia monitoring devices are used to track and monitor irregular heart rhythms. Arrhythmia is a heart condition that affects the pace or rhythm of the heartbeat.

The main types of arrhythmia monitoring devices are ECG, implantable monitors, holter monitors and mobile cardiac telemetry. ECG is used to detect electrical impulses generated by the heart. An electrocardiogram (ECG or EKG) is a device that measures the electrical signal from the heart to diagnose various cardiac problems. The different applications of arrhythmia monitoring devices include bradycardia, tachycardia, atrial fibrillation, ventricular fibrillation, premature contraction and other applications. Arrhythmia monitoring devices are used by end-users including hospitals and diagnostic centers, ambulatory centers and other end users.
