An allergy is a reaction of the immune system to an allergen that isn't normally detrimental to the human body. Allergens are foreign substances that cause allergic reactions. Allergens include foods such as peanuts, milk, eggs, and wheat, as well as pollen and pet dander. Allergy diagnostics is a procedure used by a qualified allergy specialist to evaluate if the body is allergic to a certain substance.

The main types of allergy diagnostics tests are in-vivo allergy tests and in-vitro allergy tests. In-vivo allergy tests are performed on the human body to identify the cause of the allergic reaction. In-vitro allergy tests are performed in laboratories using test tubes and Petri dishes to identify the allergy-causing substance. The main products in allergy diagnostics include consumables, instruments, and luminometers. By allergens, the allergy diagnostics market is segmented into inhaled allergens, food allergens, and drug allergens. Major end-users of allergy diagnostics include diagnostic laboratories, hospital-based laboratories, and academic and research institutes.
