The algae products refer to a class of photosynthetic organisms found in both marine and freshwater habitats and are used in various industries for different purposes. As these organisms have a short doubling time, they are considered among the fastest-growing creatures. Algae are oxygen-exhaling, unicellular, or multicellular microorganisms that consume carbon dioxide and store essential nutrients, minerals, and vitamins.

The main types of algae products are lipids, carrageenan, carotenoids, alginate, and algal protein. Algal lipids are extensively used for the production of biofuel. The different forms include liquid, and solid and involve various sources such as blue-green algae, brown algae, green algae, and red algae. These are distributed online, and offline, and are used in food and beverage, nutraceutical and diet supplementation, animal feed, personal care, pharmaceutical, and other applications.
