Aircraft doors refer to the doors in the aircraft which the passengers use to exit and board the plane. The passenger doors are used during boarding and are located at the front, middle, and rear sections of an aircraft. The aircraft doors maintain the necessary internal pressure and ensure the safety of the aircraft. The aircraft door is used to impart access control to many compartments of an aircraft.

The main types of doors in the aircraft doors are passenger doors, cargo doors, emergency doors, service or access doors, landing gear doors, and others. The passenger door refers to the door that incorporates integral stairs with a retractable lower step and folding handrails. The major aircraft types are narrow-body aircraft, wide-body aircraft, very large-body aircraft, and regional aircraft. The main operating mechanisms include manual and hydraulic. The different applications include commercial aviation and military aviation. The various distribution channels include original equipment manufacturer and aftermarket.
