The airport moving walkway is a slow-moving conveyor system that transports people over horizontal or inclined planes over a shorter distance and assist people in reaching the desired location at airports. They are installed in pairs with opposite directions of roll, with safety handrails alongside. They are also known as flat escalators or travelator machines.

The main types of airports moving walkways are belt type and pallet type. The belt-type moving walkways are built with mesh metal belts or rubber walking surfaces over metal rollers. These can either be inclined or flat and are generally used in airports, metro terminals, or shopping malls. The various inclination angles of airport moving walkways are horizontal and inclined, which are divided by various business types into new installation, modernization, and maintenance. The types of speed for airport moving walkways are constant moving walkways (CMW) and accelerating moving walkways.
