Antimicrobial textile refers to any fabric or products made by weaving, knitting, or felting that are intended to either completely or severely restrict the growth of microbes. Antimicrobial textiles are active textiles that help to resist harmful bacteria by up to 99.9% by attacking them at the cellular level to inhibit their reproduction and growth.

The main types of fibers in the antimicrobial textile are cotton, polyester, polyamide, and others. Polyamide fibers are typically made from linear aliphatic polyamides with molecular weights ranging from 15,000 to 30,000, the most common of which being polycaproamide and polyhexamethylene adipamide. The different active agents include synthetic organic agents, metal and metallic salts, bio-based agents, and others and are used in various applications such as medical textiles, apparel, home textiles, commercial textiles, industrial textiles, and others.
