Automotive Coatings Market Report 2024 – Market  
Size, Trends, And Forecast 2024-2033

The automotive coatings are applied to the surface of automobiles to protect them from corrosion and improve their aesthetic value. Automotive coatings are used to coat interior and exterior parts of vehicles with some powder or liquid to enhance the look and toughness of automobiles and also to make them heat- and shock-resistant.

The main types of automotive coatings are clearcoat, basecoat, e-coat, and primer. The vehicle clear coat is the final coat of paint that is applied to the vehicle after the primer and pigmented paint have been applied. It's a clear, glossy coating that's meant to improve the look of the vehicle's paint while also protecting it from environmental damage. The coatings are manufactured based on various technologies, such as solvent-borne, water-borne, and powder coatings using polyurethane, epoxy, and acrylic resins. Automotive coatings are used on metal and plastic substrates for OEM and refinishing applications.
