Aviation and defense cyber security refers to highly reliant and progressively interconnected cybersecurity that encompasses the protection of information in the form of digital data and information associated with networks, websites, services, computers, and portals that transport and enable security. The aviation and defense cyber security is used to prevent or mitigate the effects of a cyberattack. Aviation relies heavily on cyber-enabled technologies to improve the safety and efficiency of air travel.

The main types of components in aviation and defense cyber security are solutions and services. The solution refers to tools and services that help to protect administrations against cyberattacks, which may result in application downtime, theft of sensitive data, and other hostile consequences. It is deployed in on-cloud and on-premises models.
