Aviation lubricants refer to advanced fluids that are used to lubricate the various parts of an aircraft by providing additional functions such as engine cooling, cleanliness, and anti-corrosion. The primary purpose of a lubricant is to reduce friction between moving parts. Aviation lubricants aid in the maintenance of aircraft engines against wear, sludge, and corrosion, resulting in improved performance and energy efficiency.

The main types of aviation lubricants are engine oil, grease, special lubricants and additives, and hydraulic fluid. The engine oil refers to a type of oil used in the aircraft engine for smooth and effective movement of the engine parts and to reduce friction. Engine oil in aviation is also used for a number of functions, such as lubrication, cooling, cleaning, corrosion protection, and others. Aviation lubrications uses synthetic and mineral-based technologies in their manufacturing activities, and they are used for lubrication of hydraulic systems, engine, landing gear, airframe, and other components. The end-users of aviation lubricants include business jets and turboprop planes, large commercial jets, piston engine aircraft, defense aircraft, helicopters, and other aircrafts.
