The bed monitoring system & baby monitoring system are used for tracking the activities of babies. These systems use various sensors to track the activities of the patients and the babies and notify the caregivers or parents if there is any deviation in their normal behavior to make sure to check on them in case of an emergency. A sensor is designed to be placed under the mattress of a bed, near the bed frame, and is completely sealed against contamination, eliminating the need to discard the sensor after a patient is discharged. Ribbon switches are placed between stiff Plexiglas plates in the assembly of the sensor.

The main types of bed monitoring system & baby monitoring system include bedsore monitoring solutions, baby monitoring solutions, elderly monitoring solutions, and sleep monitoring solutions. The bedsore monitoring solutions are used to monitor the areas suffering pressure sores or bed sores. When the skin and soft tissue are pressed against a harder surface for an extended period of time, such as a bed or chair, a pressure ulcer can form. The different end-users include homecare settings, hospitals, nursing homes, and assisted living facilities.
