Automotive HVAC refers to the technology for indoor and automotive ambient comfort, which is known as heating, ventilation, and air conditioning (HVAC). The three subsystems, such as heating, cooling, and air conditioning, work together to ensure that users are provided with clean air through ventilation. It also regulates the temperature of the air, inspects the moisture content of the air, and removes excess humidity from the circulating air. It is used to regulate the temperature and climate of the vehicle.

The main components of automotive HVAC are the evaporator, compressor, condenser, receiver or drier, and expansion device. An evaporator is a device that ensures the refrigerant evaporates, thus changing its state from a liquid to a gaseous form. The technologies include manual and automatic. The various types of vehicles include passenger cars, commercial vehicles, light commercial vehicles, and heavy commercial vehicles.
