The automotive tinting film refers to thin laminate films applied to vehicles to reduce the heat and radiation from the sun that enters the vehicle's interior, which helps control the temperature inside the vehicle. These tinting films can differ from one location to another due to a specific region's climate or heat level.

The main types of automotive tinting film are window film, paint protection film, wrap film, and

other types. The window film refers to a unique film or coating applied to windows on an automobile to prevent a specific spectrum or amount of sunlight from passing through the glass. Window tint can also reduce sun glare and keep harmful UV rays away from reaching the car occupant. The various types of materials used in automotive tinting film include dyed, metalized, ceramic, and other materials that are suitable for passenger cars, LCVs, and HCVs.
