Blood collection devices are devices used to collect blood samples from the body. Blood collection devices are used for health and wellness testing, population studies, or research and preclinical drug studies.

The main types of blood collection devices include blood collection tubes, lancets, micro container tubes, and warming devices. The blood collection tubes refer to tubes used for coagulation investigations and sodium citrate-containing blood collection. Blood collection tubes are used for various components and conduct blood into and out of a patient's body to get tested in the laboratory. Different tests and biochemical assays require various types of sample collection tubes. The different materials used in the manufacturing of blood collection devices include glass, stainless steel, and plastic. They are used in manual and automatic blood collection by hospitals, blood collection centers, diagnostic centers, and others.
