The biopesticides include certain types of pesticides derived from natural materials such as animals, plants, bacteria, and certain minerals. Biopesticides are biological, natural substances that manage a wide range of agricultural pests found in forests, gardens, and farmlands. This includes plant-incorporated protectants, biochemical pesticides, and microbial pesticides.

The main types of biopesticides are bioinsecticides, bio fungicides, bionematicides, bioherbicides, and others. Bio nematodes are biopesticides used to protect crops from nematode infestation. Bio nematicides are environmentally friendly and have no negative effects on soil fertility or crop quality. The various sources of biopesticides include microbials, biochemicals, and beneficial insects and are available in liquid and dry formulations. Biopesticides are applied for different modes of application such as seed treatment, soil treatment, foliar spray, and others.
