The cannabidiol is defined as a chemical compound found in hemp or marijuana. Cannabidiol or

CBD is derived from the Cannabis Sativa plant that is also known as hemp or cannabis. Cannabidiol is used to treat epilepsy, anxiety, dystonia, pain, Parkinson's disease, Crohn's disease, and various other health problems. Its other applications include coffee products, skincare products, and pet treats.

The main product types of cannabidiol are oil, tinctures, suppository, transdermal patches, vape oil, isolates, creams and roll-on, capsules, tablets, and other products. CBD oil is created by extracting CBD from cannabis plants and diluting it with a carrier oil such as coconut or hemp seed oil. The source of these is marijuana and hemp used as CBD oil and supplements. The applications of these are medical, personal use, pharmaceuticals, and wellness and can be distributed across various channels such as hospital pharmacies, retail pharmacies, online stores, and other distribution channels.
