Building thermal insulation refers to thermal insulation that prevents heat from moving from one substance to another when they are in thermal contact. The thermal conductivity of insulation serves as a measurement and is accomplished using low thermally conductive materials.

The main types of materials in the building thermal insulation market are foamed plastic, mineral wool, aerogels, cellulose, and others. Glass wool refers to an insulating material produced from glass fibers bound together with a binder to create a texture similar to wool. Glass wool is used to slow the movement of sound, heat, and cold through buildings. The different products include glass wool, mineral wool, expanded polystyrene (EPS), extruded polystyrene (XPS), and others that are used in roof insulation, wall insulation, and floor insulation. The several end users include residential, commercial, and industrial.
