Central lab is a lab that provides bundled services where all of the samples from the trial's clinical locations are submitted. This ensures that the results and analysis are consistent.

The main types of services in the central lab are genetic services, biomarker services, microbiology services, anatomic pathology and histology, specimen management and storage, special chemistry services, and others. Genetic services are services that identify and counsel those who are at risk for genetic abnormalities. The different test types include human and tumor genetics, clinical chemistry, medical microbiology and cytology, and other esoteric tests that are employed in several end-users such as pharmaceutical companies, academic and research institutes, and biotechnology companies.
