Cationic starch refers to a type of modified starch produced by combining a reactive chemical with a slurry of a partly swelled starch granules. It is used as wet end additives, rheology modifiers, paper binders, thickening agents, flocculants, emulsion stabilizers, and coating agents. Cationic starch aims to enhance tear strength, help bind particles together on the base material, and increase fiber and filler retention.

The main types of cationic starch include corn cationic starch, tapioca cationic starch, potato cationic starch, and wheat & other cationic starch. Corn cationic starch refers to a type of starch in which derivatives with a high degree of substitution are prepared in an alkaline solution. It has different nature that are organic and conventional, these are widely used in wet end additives in papermaking, as it assists in getting greater thickness. These cationic starches are used in paper-making performance, textile industry, mining & sewage treatment industries.
