The grain processing equipment are machinery or equipment used for processing different types of grains. Grain processing is essentially a physical procedure that involves cleaning the kernel, adjusting the moisture content to the appropriate level, and mechanically sizing the grains to the required size. Grains are processed to produce products that are primarily used for human or animal consumption.

The main types of machines in grain processing equipment are pre-processing and processing. The pre-processing segment manufactures pre-processing equipment for processing different grains. All the grains are pre-processed, such as removing foreign particles including stones, immature grains, and other impurities before processing. The different modes of operation include automatic and semi-automatic and are used in various applications such as cleaning, grading, handling, coatiers, and dryers. It is distributed through several channels, including online and offline.
