Glass curtain walls are aluminum-framed lighter weight facades that house glass or metal panels. These glazing systems are incapable of supporting the weight of a roof or floor. Glass curtain walls are frequently used as part of a building envelope or as a component of a wall system. These are used to keep air and water out of the building, essentially acting as a buffer and an insulator.

The main system types of glass curtain wall are unitized, and stick. The unitized glass curtain wall refers to curtain systems made of large glass units that are assembled and glazed in the factory and then shipped to the construction site. The various end-uses include commercial, public, and residential in applications such as exterior glazed, interior glazed.
