Horse feed is used to feed horses. Horse feed refers to food that is specifically grown and developed for horse consumption and that provides energy, nutrition, or both when added to their diet. The horse feed is fed to horses with a fiber-based diet such as grass, pasture grass, hay, hay replacement, concentrates such as small grains, such as corn, oats, and barley, or

supplements that include protein and vitamin-mineral supplements.

The main types of horse feed are performance, senior or old, professional, mare and foal, and others. Performance horse feed is used for activities such as walking, trotting, cantering, running, jumping, and turning, and includes starch, cereal grains such as oats, corn, or barley, fats such as corn and soybean oil, flax, and rice bran, protein, and fiber. The different nutrition types include high fiber, low starch, high protein, and high fat, which include various ingredients such as cereals, supplements, cakes, meals, and others. The several forms include pellets, cubes, and powder. The different applications include online sales and offline retail.
