The Steinberg Law Group has decades of experience in handling mesothelioma and other asbestos-related cases. With offices in New York, California and Texas, The Steinberg Law Group has a national footprint that helps win the best possible financial compensation for clients. www.thesteinberglawgroup.com

Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent trades that encountered large quantities of asbestos include: power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is from 10 to 50 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2024 were exposed decades ago.

Oregon contains both natural asbestos deposits and a handful of asbestos mines. Oregonians who worked in the lumber, agriculture, and paper industries are at an increased risk of developing an asbestos-related illness. In addition, Oregon's large shipping industry put residents in close contact with asbestos for many decades. www.mesotheliomaoptions.com
