Healthcare CRM is a customer relationship management (CRM) system made exclusively for the healthcare sector that combines data from numerous sources (consumer and patient demographics, psychographics, social, behavioral, clinical, financial, website, contact centre, provider credentialing, etc.) to give a thorough picture of patients' routines and activities.

The main components of healthcare CRM are software and services. CRM software is a platform that connects different healthcare departments, such as from sales and marketing to customer service, and it collects and arranges data in an organized manner. The different technologies include cloud-based, mobile, social, collaborative, predictive, and others that are developed on an on-premise model or web or cloud-based model. The various applications involved are community outreach, community health education, service outreach or promotion, financial donor management, care coordination, patient information management, pre-authorizations or eligibility, and others that are used by providers, payers, and the life science industry.
