The term hydrocolloids refers to a substance that forms a gel in the presence of water. Hydrocolloids are high-molecular-weight polysaccharides derived from plants and algae or synthesized by bacteria. A hydrocolloid is particle dispersion in water made up of molecules that bind to the water and one another.

The main types of products in hydrocolloids are carrageenan, guar gum, gelatin, pectin, microcrystalline cellulose, and others. Carrageenan is a natural hydrocolloid that is derived from seaweeds. Their processing removes undesirable natural fibers and mucilage from the weed, and the result is a powder. The different functions include thickening, gelling, stabilizing, and others and are extracted from various sources such as botanical, microbial, animal, seaweed, and synthetic. It is used in several applications, including food and beverages, pharmaceuticals, personal care products, and others.
