Healthcare analytical testing service refers to the process of validation of procedures used in drug discovery and development, finished products, and the detection of microorganisms in biological drugs, suspensions, and emulsions.

The main types of healthcare analytical testing services are bioanalytical testing services, physical characterization services, method development and validation testing services, raw material testing services, batch-release testing services, stability testing, microbial testing services, and others. Bioanalytical testing services use medical devices to provide pharmacokinetics and pharmacodynamics aspects and determine drug and metabolite content in blood and urine used in pharmacological and toxicological research. Bioanalytical refers to the process of detection of metabolites in biological fluids. The different end users include pharmaceutical and biopharmaceutical companies, medical device companies, and clinical research organizations.
