Industrial water treatment chemicals such as coagulants, flocculants, and PH adjustment chemicals are used in wastewater treatment to adjust pH, begin coagulating solids in the wastewater, and remove bacteria before the wastewater is delivered to a clean or portable water supply for consumption.

Industrial water treatment chemicals are segmented by product into antifoams, oxygen scavengers, corrosion inhibitors, biocides and disinfectants, oxidants, PH conditioners, sludge conditioners, scale inhibitors, and others. Antifoams are used in the application of microbiological fermentation techniques. Antifoams are also used by wiping on filling nozzles on a screen suspended above the foaming system rims of processing vats. The various end users are oil and gas, power, metal and mining, and chemicals. These are used in various applications such as raw water treatment, cooling and boilers, effluent water treatment, and water desalination.
