The industrial air compressor is a device that utilizes an electric, diesel, or gas-powered engine to convert power to potential energy stored in pressurized air. It uses one or more reciprocating

pistons to draw in air and compress it. The compressed air is then directed towards various tools such as jackhammers, paint sprayers, impact wrenches, and others.

The main types of industrial air compressors are rotary air compressors, reciprocating air compressors, and centrifugal air compressors. Rotational air compressors are rotary positive displacement devices that can operate at high speeds over a wide range of pressures and flows. These are divided into positive displacement and dynamic displacement with a variety of seals such as oil-free seals and oil-lubricated seals. They can be used in several industries such as food and beverage, oil and gas, energy and mining, semiconductor and electronics, manufacturing, construction and municipal, pharmaceuticals, agriculture/farming.
