Hand-held surgical instruments are usually built of premium stainless steel and come in a wide range of sizes, styles, and shapes appropriate for various surgical procedures. Hand-held surgical instruments are used in the surgical procedures and operated on while being held in hand. A wide variety of hand-held surgical instruments are used in numerous surgical operations, including scalpels, forceps, scissors, and retractors.

The main product types of hand-held surgical instruments are forceps, retractors, dilators, graspers, scalpels, and others. Forceps are used for securely grabbing, pulling, or holding items, especially during delicate operations. A forceps is a two-bladed tool with a handle that can be used for various tasks, including managing sterile dressings, squeezing or gripping tissues, and others. Neurosurgery, cardiovascular, orthopedic, plastic and reconstructive surgery, obstetrics and gynecology are the applications of hand-held surgical instruments. These instruments are used by hospitals, clinics, and ambulatory surgical centers.
