Heating equipment is a device that generates heat to regulate a space's temperature using thermal energy. A freestanding stove, fireplace, or non-electric stove is some heating devices intended to generate heat for a room or indoor area. Heating equipment is also used in laboratories for experiments and other industrial purposes.

The main types of heating equipment are heat pumps, furnaces, boilers, unitary heaters, and others. A heat pump is a device that uses electric or mechanical methods to move heat from one location to another. Heat pumps are used to make the warm space warmer and the cool space cooler by transferring heat from one to the other. The different technologies include water source, and ground source that are used in residential, commercial, and industrial applications.
