Hexane is a colorless, flammable liquid that is used as a solvent and is created from the distillation of petroleum. It is commonly used as a non-polar solvent that is very volatile, inexpensive, generally safe, and easily evaporated.

The main types of hexane are n-hexane, isohexane, and neohexene. N-hexane is a highly combustible chemical derived from crude oil, and it is a colorless liquid with a mildly unpleasant odor. Isohexane is a highly flammable chemical derived from the fractional distillation of petroleum and is a colorless and odorless liquid. Neohexene is a colorless liquid organic compound with a mild sweet odor. The different grades include polymer grade, food grade, and other grades and are used in industrial solvents, edible oil extractant, adhesives and sealants, paints and coatings, and others.
