Industrial alcohol is a kind of alcohol that is utilized in industrial applications. Ethanol is the most frequent form of industrial alcohol. Adhesives, cosmetics, detergents, explosives, inks, and hand creams are all made with this alcohol. Industrial alcohol is used in the production of vaccinations, compound tonics, syrups, tinctures, liniments, and antiseptics.

The main types of industrial alcohol include isopropyl alcohol, methyl alcohol, ethyl alcohol, isobutyl alcohol, and benzyl alcohol. Isopropyl alcohol is used as an ingredient in various cosmetics and medicinal preparations for external use. Isopropyl alcohol is an isomer of propyl alcohol and a homologue of ethyl alcohol, with properties similar to those when used externally but more toxic when consumed internally. The fermentation methods used are fermentation and synthetic, and they are sourced from molasses, sugar, grains, and fossil fuels. The different applications include fuel, chemical intermediates and solvents, pharmaceuticals, personal care products, and food ingredients.
