The leavening agents are used in baking to make a lighter and softer batter. Leavening agents are substances that make the dough or batter airy by releasing air or carbon dioxide. Such agents include steam, air, yeast, baking soda, and baking powder.

The main forms of leavening agents are biological, physical, and chemical forms. Biological leavening agents refer to agents that have harmless micro-organisms that help in the process of leavening mainly by producing carbon dioxide after being added to food. These are used in various applications such as seafood, bakery products, fried foods, wheat flour, and soy products and are sold through different sales channels such as direct sales and wholesalers, independent grocery retailers, non-store retailers, and other sales channels.
