Kefir refers to fermented dairy products made up of kefir grains, which consist of bacteria and yeast. Kefir is produced by fermenting milk with commercialized freeze-dried kefir starter cultures, traditional kefir grains, and products that remain after the removal of kefir grains. Kefir contains bacteria and yeast that are actively developing. The impact of bacteria and yeast on milk causes the creation of enzymes and substances that influence the digestion of meals.

The main types of kefir include milk kefir and water kefir, which are sourced from animal milk, soy milk, coconut milk and others. Milk kefir refers to a fermented dairy product and is made by adding the culture to the milk and keeping it warm like yogurt. Milk kefir is high in probiotics and aids digestion. They are available in organic and conventional forms with flavored and unflavored categories. These products are distributed through supermarkets/hypermarkets, convenience stores, specialty stores, and other distribution channels.
