Insulin patch pumps are small, computerized devices with pre-programmed delivery of insulin dosage to a diabetic patient to conveniently manage their blood sugar. An insulin patch pump is often attached to a strap under the garments, in a pocket, on the waist belt, and with an adhesive patch on the stomach or arm of the patient.

The main types of insulin patch pumps are traditional insulin pumps, smart insulin pump and disposable insulin pumps. The traditional insulin pumps are a small device used to deliver insulin through a small plastic tube. The device continually pumps insulin throughout the day and night. Before meals, it can also supply insulin more quickly. These mode of delivery includes basal and bolus. The pumps come in two types namely tethered pump and patch pump to treat patients with type 1 diabetes and type 2 diabetes. These are mainly used in hospital, clinics, laboratories, and others.
