The liquid feed are used to condition rations, improve palatability, reduce dustiness, and provide nutrients to livestock. Liquid feeding refers to mixing and distributing livestock-friendly feed in liquid form. Liquid feeding will involve the use of a diet prepared either from a mixture of liquid food industry by-products and conventional dry materials or from dry raw materials mixed with water.

The main types of products in liquid feed are protein, minerals, vitamins, enzymes, and others. The protein includes feeds of plant and animal origin with high protein content. The different sources include prills, granules, corn, urea, wheat barn, and others, and involve various livestock such as ruminants, poultry, swine, aquaculture, and others.
