Natural gas generator refers to a type of generator that runs on natural gas rather than petrol or diesel. A mixture of fuel and air is inserted into a combustion chamber to create electricity in a natural gas generator.

The main types of the natural gas generator are standby and prime. A Stand-by generator refers to a backup power solution that delivers power to business activities, commercial and industrial applications, or facilities in the event of a power outage. They are available in low power genset, medium power genset, and high power genset ratings in a single phase, and 3 phase, which are made of aluminum, composite, and steel and used by industrial, commercial, and residential end-users.
