Medical coating refers to a coating that is employed to reduce unfavorable side effects such as bacterial infection, blood clotting, and tissue trauma. Coating technology uses dry or water-based formulations, enabling processing without the use of solvents. The medical coatings market consists of sales of medical coatings by entities (organizations, sole traders, and partnerships) that are used for the absolute cleanliness and sterilization process of medical and surgical instruments.

The main types of medical coatings are anti-microbial coatings, hydrophilic coatings, anti-thrombogenic coatings, and other types. A hydrophilic coating is a coating that has an affinity for water. The material types are polymers, metals, and other material types. The various applications involved medical devices, medical implants, medical equipment and tools, protective clothing, and other applications.
