Medical adhesive tape refers to a type of strip of fabric or other material that is coated with a pressure-sensitive material on one side and sticks quickly to a wounded surface. These tapes are usually breathable, comfortable, and easy to use, and they cover wounds to reduce exposure to germs.

The main types of medical adhesive tapes are acrylic, silicone, rubber, and other types. Acrylic adhesive tapes have low skin sensitivity and do not leave residue on the skin after removal. Acrylic adhesives, such as pressure-sensitive tapes, are used for disposable and bandage applications. The various materials of medical adhesive tapes are paper, fabric, and plastic that are used in various applications including surgery, wound dressing, splints, secure IV lines, ostomy seals, and other applications.
