

Interfacing Unveils Ground-breaking EPC Version 15: Revolutionizing Process Creation and Improvement with Generative AI

The new AI-powered process and quality management innovation transforms how businesses will forever create, analyze, and improve processes and procedures.

MONTREAL, QUEBEC, CANADA, January 25, 2024 /EINPresswire.com/ -- Interfacing Technologies Corporation, a leader in quality, compliance, improvement, and automation solutions, proudly announces the release of its innovative Version 15, incorporating cutting-edge [process generative AI technology](#). This update transforms how businesses will forever create, analyze, and improve processes and procedures, giving them an edge over the competition and the flexibility needed to adapt quickly in today's dynamic environment.

Revolutionizing Process Creation and Improvement with Process Generative AI

“

EPC 15: A game-changer in the AI-driven process revolution, cutting costs, enhancing quality, and boosting compliance for businesses.”

Scott Armstrong

The new AI capabilities in Version 15 allow for rapid creation of documentation from scratch, enhancing efficiency and accuracy. Users can generate comprehensive process maps, including sub-processes, procedures, system work instructions, and associated roles, tailored to specific operational and compliance needs. This feature significantly reduces the time and effort traditionally required for manual documentation.

Moreover, Version 15's AI system excels at enhancing

existing documentation by identifying gaps, inefficiencies, and errors. This ensures that businesses maintain up-to-date and optimized processes, adapting swiftly to changing market demands. The AI-driven approach extends beyond documentation, also offering operational process improvement recommendations to accelerate product delivery, enhance quality, and reduce costs, making it an invaluable tool for businesses seeking to stay ahead in a fast-paced

environment without the overhead of additional human resources.

Interfacing's commitment to compliance and risk management is evident in Version 15. The AI system proactively identifies potential compliance conflicts and advises on regulatory standards, ensuring businesses remain compliant and resilient. This new release is a game-changer for businesses looking to transform their operations quickly and seamlessly while maintaining compliance.

In the words of Scott Armstrong, CEO of Interfacing, "Our latest release marks a significant milestone in our mission to disrupt the market by leveraging AI for enhancing business processes and reducing the cost and effort of compliance. Version 15 is not just a product; it's a paradigm shift in quality and process management, empowering businesses with AI-driven insights for unparalleled efficiency and compliance."

Following the successful release of the [AI Doc Parser](#), which converts text procedures and whiteboard workshop images to digital processes, Generative AI is the next step in Interfacing's strategic roadmap to integrate AI technologies throughout its platform. Interfacing's Version 15 stands at the forefront of the AI revolution in process discovery and improvement, inviting businesses to embrace a future where efficiency, compliance, and innovation go hand in hand.
