The binders and scaffolders are used for meat and meat substitutes. It is the process of preparing meat alternatives to provide a unique fibrous structure that gives the products a meat-like appearance. Prepared from processing animal bones, tissue, and skin which has been widely applied in food preparation, which include soybean products, vegetarian sausages, spread, or burgers. It has various health benefits due to high levels of protein and vitamins.

The main types of binders and scaffolders for meat and meat substitutes are binders for meat and meat substitutes, and scaffolders for cultured meat. Collagen and gelatin, both of which are produced from animals, are the most common scaffolds utilized in cultured meat research. Plant-derived biomaterials for scaffolding are being investigated extensively to correspond with the cell-based meat concept, which includes environmental conservation and animal welfare. Binding agents in meat analogs might be animal or plant-based substances that act as both a water and fat binder. The meat types are beef, pork, fish, and poultry with applications in various industries such as meat products, meat substitutes, and cultured meat.
