C4ISR refers to command and control, communications, computers, intelligence, surveillance, and reconnaissance that are advanced facilities, equipment, and systems. The C4ISR is used by the armed forces for planning military operations and communication to collect critical reconnaissance and surveillance data for decision making. These systems used next-generation networks and rely on sophisticated satellites for secure and resilient communication, these systems play a key role in the operation and defense purposes of the armed forces.

The main platform of C4ISR markets is land, airborne, naval, and space. Land refers to the installation of Command, Control, Communications, Computers (C4) Intelligence, Surveillance, and Reconnaissance on land that is used for defense purposes to provide an advantage through situational awareness. The solution includes hardware, application software, and services. Intelligence, communication, command, computer, and electronics are the applications. The end-users are defense and space, and commercial.
