The Business Research Company's Bone Densitometer Global Market Report 2024 – Market Size, Trends, And Global Forecast 2024-2033

[The Business Research Company's](#) "Bone Densitometer Global Market Report 2024 is a comprehensive source of information that covers every facet of the market. As per TBRC's market forecast, the bone densitometer market size is predicted to reach \$2 billion in 2028 at a compound annual growth rate (CAGR) of 9.6%.

“

The bone densitometer market size is expected to see strong growth in the next few years. It will grow to \$2 billion in 2028 at a compound annual growth rate (CAGR) of 9.6%.”

*The Business Research
Company*

The growth in the bone densitometer market is due to the surge in the incidence of osteoporosis. North America region is expected to hold the largest bone densitometer market share. Major players in the bone densitometer market include Diagnostic Medical Systems SA, GE Healthcare Technologies Inc., Hologic Inc., BeamMed Ltd., Demetech AB, Osteometer Meditech Inc.

[Bone Densitometer Market Segments](#)

•By Type: DXA Systems, Peripheral Bone Densitometers,

Radiographic Absorptiometry Scanners, Quantitative Ultrasound Scanners

•By Application: Osteoporosis & Osteopenia Diagnosis, Cystic Fibrosis Diagnosis, Body Composition Measurement, Rheumatoid Arthritis Diagnosis

•By End-User: Hospitals, Clinics, Diagnostic and Imaging Centers, Other End-Users

•By Geography: The global bone densitometer market is segmented into North America, South America, Asia-Pacific, Eastern Europe, Western Europe, Middle East and Africa.

A bone densitometer refers to medical equipment used to calculate bone mineral density. A bone densitometer is an improved X-ray medical device used to measure the minerals and density of bones in hospitals and diagnostic centers. The bone densitometer aims to gather medical status related to loss of bone minerals, osteopenia or osteoporosis, risk of fracture, and bone-related medical conditions.

The main types of bone densitometers include DXA systems, peripheral bone densitometers, radiographic absorptiometry scanners, and quantitative ultrasound scanners. The DXA (dual-energy x-ray absorptiometry) systems refer to an advanced form of x-ray technology-based bone densitometer used to measure bone mineral density. It utilizes a small dose of ionizing radiation to produce a picture of the inside of the body to measure bone loss. They are used in hospitals, clinics, diagnosis and image centers, and other end-users for cystic fibrosis diagnosis, osteoporosis & osteopenia diagnosis, rheumatoid arthritis diagnosis, and body composition measurement.
