SHERIDAN, WY, UNITED STATES, February 1, 2024 /EINPresswire.com/ -- In the first half of 2023, the Asian Butyl Acetate market showed mixed price sentiments. Initially, prices rose due to increased demand from downstream coatings and adhesive industries, while supplies were limited after Covid restrictions were lifted. However, as production ramped up and inventories leveled, demand normalized and eventually declined, causing prices to downturn. In Europe, similar trends were observed, with downstream demands driving prices until excess supplies led to a decline. North America, on the other hand, experienced consistently inclined prices due to stable demands and positive feedstock costs. Overall, the global market fluctuated, with North America standing out with inclined price patterns.

Definition

Butyl Acetate is a chemical compound with the molecular formula C₆H₁₂O₂. It is an ester formed from butanol (a four-carbon alcohol) and acetic acid. This colorless liquid has a pleasant fruity odor, making it valuable as a solvent in various industries, including paints, coatings, and inks. Butyl Acetate's low volatility and good solubility in other chemicals make it an ideal choice for these applications. Additionally, it serves as a flavoring agent in the food industry and finds use in the production of perfumes and artificial fruit essences.
