

Aircraft De-icing Market 2024-2031 - Global Trends, Growth Opportunities and Competitive Landscape | CLARIANT, Kilfrost

CALIFORNIA, UNITED STATES, February 6, 2024 /EINPresswire.com/ -- Aircraft de-icing is an essential process that ensures the safety of passengers, crew, and aircraft during winter and icy weather conditions. The process involves removing snow, frost, and ice from the aircraft's surface to prevent ice accumulation, which can affect its aerodynamic performance. The de-icing process typically involves spraying a heated fluid, such as a mixture of water and glycol, onto the aircraft's

surface. This fluid melts the ice and snow, making it easier to remove. The process must be done carefully to avoid damaging the aircraft's surface. Aircraft de-icing is usually performed at airports, where specialized de-icing equipment is available. The process is carried out by trained professionals who follow strict safety guidelines to ensure the process is completed safely and efficiently.
