WakeCap launches VerifyTime – transforming timekeeping

WakeCap redefines workforce management with official launch of VerifyTime.

DUBAI, UNITED ARAB EMIRATES, February 6, 2024 /EINPresswire.com/ -- Transforming timekeeping: WakeCap redefines workforce management with official launch of VerifyTime

VerifyTime reduced undelivered hours by 65% and improved site attendance by 37%*

Dubai, UAE; 6 February 2024: WakeCap, a leader in smart solutions

Salpie Kechichian, Head of Product Management at WakeCap

for construction project management, today announces the launch of VerifyTime, a cloud-based workforce management solution designed to automate, verify, and streamline the manual timekeeping process on construction sites.

> " At WakeCap, we believe that transparency is key to improving efficiency in construction. With VerifyTime, we're addressing two challenges — finishing projects on time and keeping them within budget."
>
> *Hassan Albalawi*

The launch represents a significant milestone in construction timekeeping. Fast and effective timekeeping is the bedrock of a project's success. In construction, labor hours, equipment, materials, and other costs must be accurately measured and reported. This role usually falls to the site team and can be prone to errors and delays. VerifyTime replaces conventional timekeeping methods and brings a new level of transparency to the construction industry.

Digitization of tools and workflows is the single most important development in the construction industry today, representing the biggest potential for sweeping improvements and cost-savings. VerifyTime, including a smart hard-hat solution for construction,

outperforms traditional workforce management systems and directly addresses long-standing pain points related to timekeeping such as managing productivity and improving efficiency.

VerifyTime is built on WakeCap's patented sensor technology hardware and data analytics software. It delivers data thanks to information collected through a knob attached to a standard safety helmet worn by site workers. An easy-to-install mesh network connects the entire site to WakeCap's secure cloud network. Site owners and management teams receive impartial, accurate, and scientific data, monitoring efficiency instead of relying on traditional timekeeping methods. This digitized and automated data is readily available through a mobile application, eliminating manual work and significantly reducing report turnaround time.

VerifyTime's software can be used on smartphones, tablets, and desktop computers. It allows timekeepers, managers, and payroll teams to collect and integrate data in real-time, greatly reducing the time it takes to collect and analyze information about the workforce. Because the data is digital and avoids human bias, it is significantly more accurate and reliable. VerifyTime provides 'at-your fingertips' data analytics in an easy-to-understand dashboard format, with charts and graphs that offer a visual representation of the data, and metrics over time.

"At WakeCap, we've always believed that visibility and transparency are key to improving efficiency in the construction industry. With VerifyTime, we're addressing two of the biggest challenges in construction — finishing projects on time and keeping them within budget. Delays result in penalties, and VerifyTime can help mitigate that risk," said Hassan Albalawi, CEO and co-founder of WakeCap. "Digital technology is redefining how we work. Its potential to transform traditional workflows is huge."

*One WakeCap client reported that since implementing VerifyTime, they were able to reduce undelivered hours by 65%. In that same period, site attendance improved by 37%.

Key features of VerifyTime include accurate time tracking, automated timesheets, attendance & timekeeping, payroll integration, compliance and reporting, and trend analysis. These features collectively help in pinpointing and calculating undelivered work hours, allowing managers to take corrective measures promptly. The technology also generates trend reports to understand the reasons for lost hours, such as delays due to broken machinery, contributing significantly to decision-making processes aimed at minimizing waste.

"VerifyTime offers a real-time dashboard showing what's happening in the office, onsite, and beyond. Having real-time data helps our clients be proactive in decision making, ensuring fair and precise compensation for all employees. VerifyTime enables better resource planning, improves productivity, and enhances operational efficiency to reduce unnecessary project labor costs," says Salpie Kechichian, Head of Product Management at WakeCap. "It sets a completely new standard for timekeeping and the potential for improving productivity, efficiency and saving costs is enormous – as some of our clients are already discovering for themselves."

WakeCap's commitment to transforming construction into a transparent, data-driven industry has seen it recognized with several industry accolades, including winning the 2018 Start-up City Pitch Competition at The Big 5, a leading construction industry event in the Middle East. With the official launch of VerifyTime, WakeCap continues to pioneer innovative solutions that replace outdated paper-based processes with precise data collection methods, streamlining workflows, and creating significant time and cost savings.

NOTES TO EDITOR

About WakeCap
WakeCap is a deep-tech company rooted in AI and IoT, redefining the construction industry. It employs advanced sensor technology and sophisticated data analytics to provide precise, real-time insights into worker activity and equipment usage. As a data company, WakeCap uses this invaluable information to significantly improve site safety, streamline workflows, and enhance project execution. Its pioneering efforts are transforming construction from a traditional field into a modern, data-driven industry, emphasizing efficiency and intelligence. Founded in 2017 and with offices in Riyadh, Dubai, and San Francisco, WakeCap's technology enables real-time monitoring and data collection on complex projects such as construction sites, where it isn't possible for team leaders to be everywhere and see everything. WakeCap works with leading construction brands worldwide.By leveraging our services, our clients gain valuable insights, allowing them to identify bottlenecks and make informed decisions that enhance overall efficiency.
