

Truth Quotient LLC Introduces Authentication™: A Breakthrough in Autonomous Fact-Checking Technology

Get Your Answers Within Seconds

UNION BRIDGE, MARYLAND, UNITED STATES, February 14, 2024 /EINPresswire.com/ -- Truth Quotient LLC, a pioneering company in Maryland, proudly unveils Authentication™, an autonomous fact-checking and research tool designed to combat misinformation online.

Authentication™ represents a paradigm shift in fact-checking technology, offering users near real-time responses to simple assertions within seconds. With its unique algorithms, Authentication™ scours the internet for top-tier, verifiable information, providing users with validity scores and searchable URLs for every assertion entered, along with comprehensive citations.

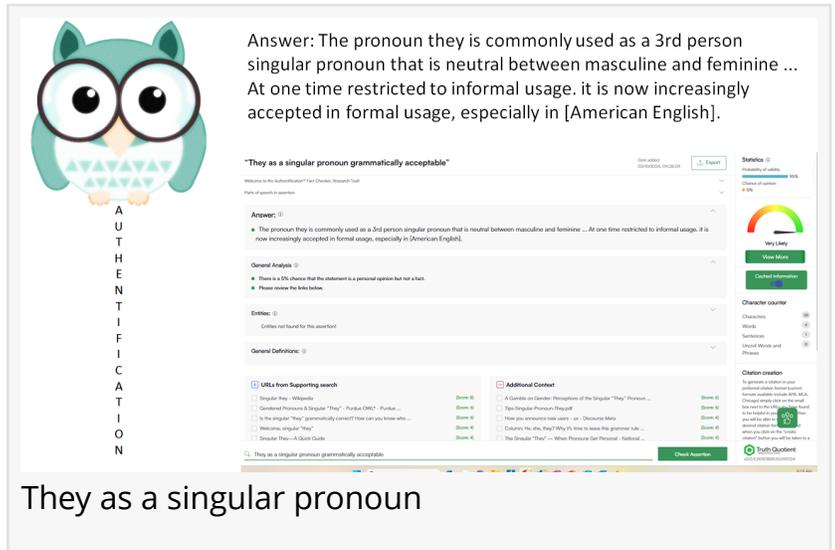

What makes Authentication™ unique is that it is not an AI platform. We wanted to ensure the integrity of information by creating algorithms that deliver only the most reliable data to users"

John Hnatio

Dr. John Hnatio, Chief Science Officer at Truth Quotient LLC, explains the innovation behind Authentication™, stating, "What makes Authentication™ unique is that it is not an AI platform. We wanted to ensure the integrity of information by creating algorithms that deliver only the most reliable data to users."

In a thorough market analysis, Truth Quotient LLC found no competitors to Authentication™ in terms of complete autonomy and effectiveness. While some universities and colleges are researching similar tools, Authentication™

stands as the only commercially viable option available for purchase. Truth Quotient LLC is open to collaboration with academic institutions exploring this field.

The screenshot displays the Authentication™ interface. On the left is a teal owl mascot wearing glasses. The main content area shows a search result for the query "They as a singular pronoun grammatically acceptable". The answer provided is: "The pronoun they is commonly used as a 3rd person singular pronoun that is neutral between masculine and feminine ... At one time restricted to informal usage, it is now increasingly accepted in formal usage, especially in [American English].". Below the answer, there are several analysis sections: "General Analysis" (indicating a 95% chance of correctness), "Entities" (listing related terms like "They as a singular pronoun"), and "General Outcomes" (providing supporting URLs and additional context). On the right side, there are utility buttons for "Verify", "Check Information", and "Check Answer", along with a "Citation creation" section.

They as a singular pronoun

Unlike other tools that may involve human intervention, Authentication™ operates entirely autonomously, eliminating the potential for bias in the fact-checking process. Quality engineering has been integrated into the development of knowledge domains, ensuring rapid and consistent responses for users.

Authentication™ caters to a diverse demographic, including students, teachers, journalists, bloggers, researchers, fact-checking organizations, and everyday social media users. A 14-day free trial is currently available, and interested parties can use promo code TQ-2024 for a 33% discount on purchases. Feedback from users is encouraged to tailor the tool to their needs.

"Truth is just a click away with Authentication™," says Truth Quotient LLC. By empowering users to verify trending topics and combat misinformation, Authentication™ is poised to make a significant impact in the fight against online falsehoods.
