The financial services software market consists of sales of financial services software by entities (organizations, sole traders, and partnerships) that are used to deliver best practices for developing fintech software, which assists organizations with the digital transformation of financial services. Financial software is a type of software that is expressly created to automate, assist, and store financial information of a personal or professional nature. A collection of financial transactions, records, and processes are stored, analyzed, managed, and processed by it. Financial software is built on a foundation of financial information management. It can run independently of other software or as a component of a financial information system (IS).
