Typically, asbestos exposure will have occurred sometime between the 1950s and the 1980s. Some of the most prevalent professions that encountered large quantities of asbestos include power plant workers, maritime workers, industrial workers, plumbers, pipefitters, electricians, mechanics, machinists, miners, railroad workers and construction workers, to name a few. Since the latency period for mesothelioma patients is approximately 40 years, most people diagnosed with mesothelioma or asbestos-related lung cancer in 2024 were exposed decades ago.

Although western South Dakota contains a few naturally-occurring asbestos deposits, the state ranks towards the bottom when it comes to mesothelioma and asbestos-related deaths.

**THE STEINBERG LAW GROUP**

The Steinberg Law Group has decades of proven experience and the resources to help victims of asbestos exposure and their families obtain the financial compensation they deserve.

Nevertheless, South Dakota residents may have been exposed to asbestos in various other locations. Specifically, residents who worked in the military, at power plants and in the agricultural industry are at an elevated risk of developing mesothelioma or asbestos-related lung cancer. In addition, many structures in South Dakota, including schools, were built at a time when asbestos was widely used in construction projects.
